

Note regarding using the Key Maps

The key maps found in this water/sewer/lotting folders are used for identifying plans in our office. Not every plan referenced may be available online at this time. If you see something you need that is not in the appropriate folder, you can contact engineering with a service request and we can scan or copy it for you for a fee.

To read the map, follow the legend to identify the type of plan it is. The plans are organized in different folders. C=construction, RW=record water, RS=record sewer, SD=subdivision. Note the lotting key map has a legend and plans referenced do not have the full plan number name ie SD 167 will be shown on the lotting plan as 167 with green shading. Check the legend on this map for clarification.
